Open Terra and Field Access Systems Partner to Implement Next Generation Mobile Solutions in Australia and New Zealand

Canberra, Australia (September, 27, 2005) – Field Access Systems (FAS), a leading provider of innovative mobile solutions and services for Australia and New Zealand and makers of the highly successful AssetWare™ mobile suite of products, announced today that it has partnered with Open Terra, a leading provider of mobile enabling technologies, as a master distributor for Open Terra and its next generation Enterprise Mobility Suite, mSolve™ for Australia and New Zealand. Under the agreement, FAS will sell, market, implement, and support Open Terra's mobile suite of products to their customers and resellers.

Field Access Systems has over 10 years experience in the development and implementation of mobile workforce solutions. Having successfully implemented mobile workforce solutions over the past ten years for many of Australia's and New Zealand's utility, local government, transport operators and facilities management organisations, FAS has an in depth understanding of mobile telecommunications technology and implementation issues, and has been recognised through its appointment as the master distributor for Open Terra in the Australia and New Zealand markets.

"We are very excited to be partnering with Open Terra. Open Terra's business model and product offerings are complimentary to FAS' business and growth objectives", said Steve Henshaw, Managing Director of FAS. "Partnering with Open Terra provides us with the opportunity to leverage our experience into a number of emerging mobile markets. The mSolve mobility suite provides the tools to deploy solutions to the mobile market beyond the current PDA platform. We are already jointly working on several engagements together utilizing the mSolve platform, and we are building a healthy sales pipeline. Our existing clients and resellers are very excited about the partnership, which will allow us to meet the market demands for device agnostic wireless solutions and services. We will be making mSolve, and applications built on the mSolve framework available to all our resellers and proactively helping Open Terra establish and build their business here in Australia and New Zealand."

Open Terra is at the cutting edge of mobile technology development and via the FAS business channel will bring a raft of new and proven mobile technologies to the Australian and New Zealand market. Just recently Open Terra teamed up with CAPE Systems Group, in establishing a state of the art RFID Test and Integration Centre. Intel Corporation is providing equipment and infrastructure support for the new RFID Centre. It is intended that the centre will provide full testing, evaluation and integration of the latest mobile, RFID, and supply chain and logistics technologies. Open Terra is also partnered with Aware Interweave Inc, a leading systems integrator in "Real World Aware" solutions to support SAP® Mobile Applications based on Web Services Architecture.

"We are very pleased to be partnering with Field Access Systems. FAS is a recognized leader in providing mobile solutions to Australian and New Zealand businesses. With hundreds of customers and an active reseller network, FAS is a perfect fit for Open Terra's expansion efforts," said Dave Sasson, President and CEO of Open Terra. "This partnership is very synergistic and is inline with our current plans of global expansion through successful reseller relationships. We are already involved in several implementations and are excited at the tremendous potential FAS brings to our business rollout objectives."

Field Access Systems Business Development Manager, Andrew Lamrock states, “Open Terra’s mSolve will revolutionise the mobile business market. Bundled with FAS’ AssetWare, mSolve will streamline and improve the enterprise functionality and integration of our mobile workforce applications. As a standalone product or as an ASP hosted service, the business potential is enormous. mSolve is built on JAVA, with .NET support, utilising the latest in open standards to leverage enterprise processes to form seamless integration via JMS and XML/SOAP web services. Anyone who uses a mobile phone that supports Java, Blackberry, Palm, Symbian or Pocket PC is a potential mSolve user. We are certainly entering a new and very exciting business phase, and we are pleased to be utilising Open Terra’s mSolve to offer our customers the best possible solution for any mobile application”.

About Open Terra, Inc.

Founded in 2002, Open Terra Inc. is a leading provider of next generation enterprise mobility technologies.
